Dear Hiring Team,

With over 15 years of experience in data architecture, AI, and large-scale digital platforms, I thrive at the intersection of product strategy, technical execution, and cross-functional leadership. My expertise in platform architecture, data interoperability, and modular design aligns closely with your vision of building a scalable, efficient, and innovation-driven product platform.

Throughout my career, I have:

- Defined and executed platform strategies, driving scalability and modularity across enterprise architectures.
- Designed AI-powered frameworks that optimize developer experience, integration, and automation.
- Led high-impact initiatives across startups, global enterprises, and R&D projects, balancing visionary thinking with operational excellence.

At PUMA, I currently lead two cross-functional engineering teams, designing and scaling data-driven architectures that power a high-traffic e-commerce platform. My experience in data governance and observability has reinforced my ability to bridge technical execution with business objectives. Additionally, my doctoral research led to the invention of The Basin Network, a next-generation data architecture designed for AI/ML interoperability and scalability.

I am particularly excited about the opportunity to shape Parloa's product platform, ensuring it fosters product innovation, efficiency, and seamless integration. I look forward to discussing how my experience and strategic mindset can contribute to accelerating Parloa's growth.

Best regards,

Nasr Kasrin, PhD
