Dear Hiring Team,

I am excited to apply for the Staff Product Manager position at Databricks. With over 15 years of experience at the intersection of data architecture, AI, innovative solutions. I led the development of data cataloging solution for a multi-mullion Euro publicly funded manufacturing project (aerospace and automotive). I have successfully led data-driven product strategies and cross-functional teams to build scalable, high-impact solutions.

As a Lead Solution Architect at PUMA, I have:

- Led two cross-functional teams, improving PUMA.com system performance by 20% (GCP).
- Founded an internal technical governance initiative, ensuring strategic alignment across stakeholders.

Additionally, my doctoral research in data architecture led to the invention of The Basin Network, a framework for enhancing data interoperability across enterprise AI/ML applications—a challenge that resonates with Databricks' vision for scalable, governed data intelligence platforms.

I am eager to bring my technical expertise, product leadership, and strategic vision to Databricks to shape the future of data intelligence and infrastructure. I look forward to discussing how my experience can contribute to your team's success.

Sincerely,

Nasr Kasrin, PhD
