Dear Hiring Team,

I am excited to apply for the Solutions Architect – Digital Natives & Startups position in Munich. With over 15 years of experience in AI, data architecture, and innovative solutions. I have worked in startups, R&D teams, and large enterprises to design and implement scalable, data-driven solutions. This role at Databricks aligns perfectly with my expertise in helping organizations leverage cloud-based data platforms to drive innovation and efficiency.

As a Lead Solution Architect at PUMA, I have been doing stakeholder management with both technical experts and non-technical executives, additionally:

- I founded an internal technical governance initiative, driving alignment across stakeholders.
- Led two cross-functional teams, improving PUMA.com system performance by 20% in a cloud-native architectures (GCP).

Additionally, my doctoral research in data architecture led to the invention of The Basin Network, a framework for enhancing AI/ML interoperability across enterprise applications—a challenge that closely aligns with Databricks' mission to simplify and scale data intelligence.

I am eager to bring my technical expertise, customer-centric mindset, and strategic vision to help Databricks' startup customers unlock the full potential of their data. I look forward to the opportunity to discuss how I can contribute to your team's success.

Best regards,
Nasr Kasrin, PhD
