Dear Hiring Team,

With over 15 years of experience in data architecture, AI, and scalable data systems, combined with a PhD in Data Architecture, I have successfully led large-scale data transformation initiatives across industries. I am excited about the opportunity to shape RepRisk's data architecture, governance, and quality strategy, ensuring it supports the company's mission of fostering transparency through data.

As a Lead Solution Architect at PUMA, I have:

- Led cross-functional engineering teams, enhancing system performance by 20%.
- Founded an internal technical alignment initiative, driving strategic decision-making in data-driven operations.

Additionally, my doctoral research in data interoperability led to the invention of The Basin Network, a framework for enhancing AI/ML data governance and observability—directly aligning with RepRisk's goals of ensuring data integrity, transparency, and scalability.

I am eager to bring my technical expertise, leadership experience, and strategic vision to RepRisk, fostering a strong data culture, governance framework, and scalable infrastructure to support its continued growth. I look forward to discussing how my background and skills can contribute to your mission.

Best regards,
Nasr Kasrin, PhD
